# SUPER REPAIR

## The only 2-component instant adhesive that bonds and repairs

-  Bonds in 30 seconds
-  Extreme strength and toughness
-  Hardens in 5 min
-  Fills and reconstructs
-  Multimaterial
-  Can be drilled, filed, painted and more
-  Impact resistant
-  Flexible

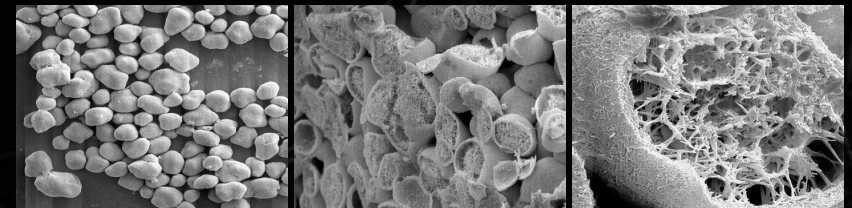

Tensile strength at 2 mm gap

— Super Repair  
— Loctite 3090

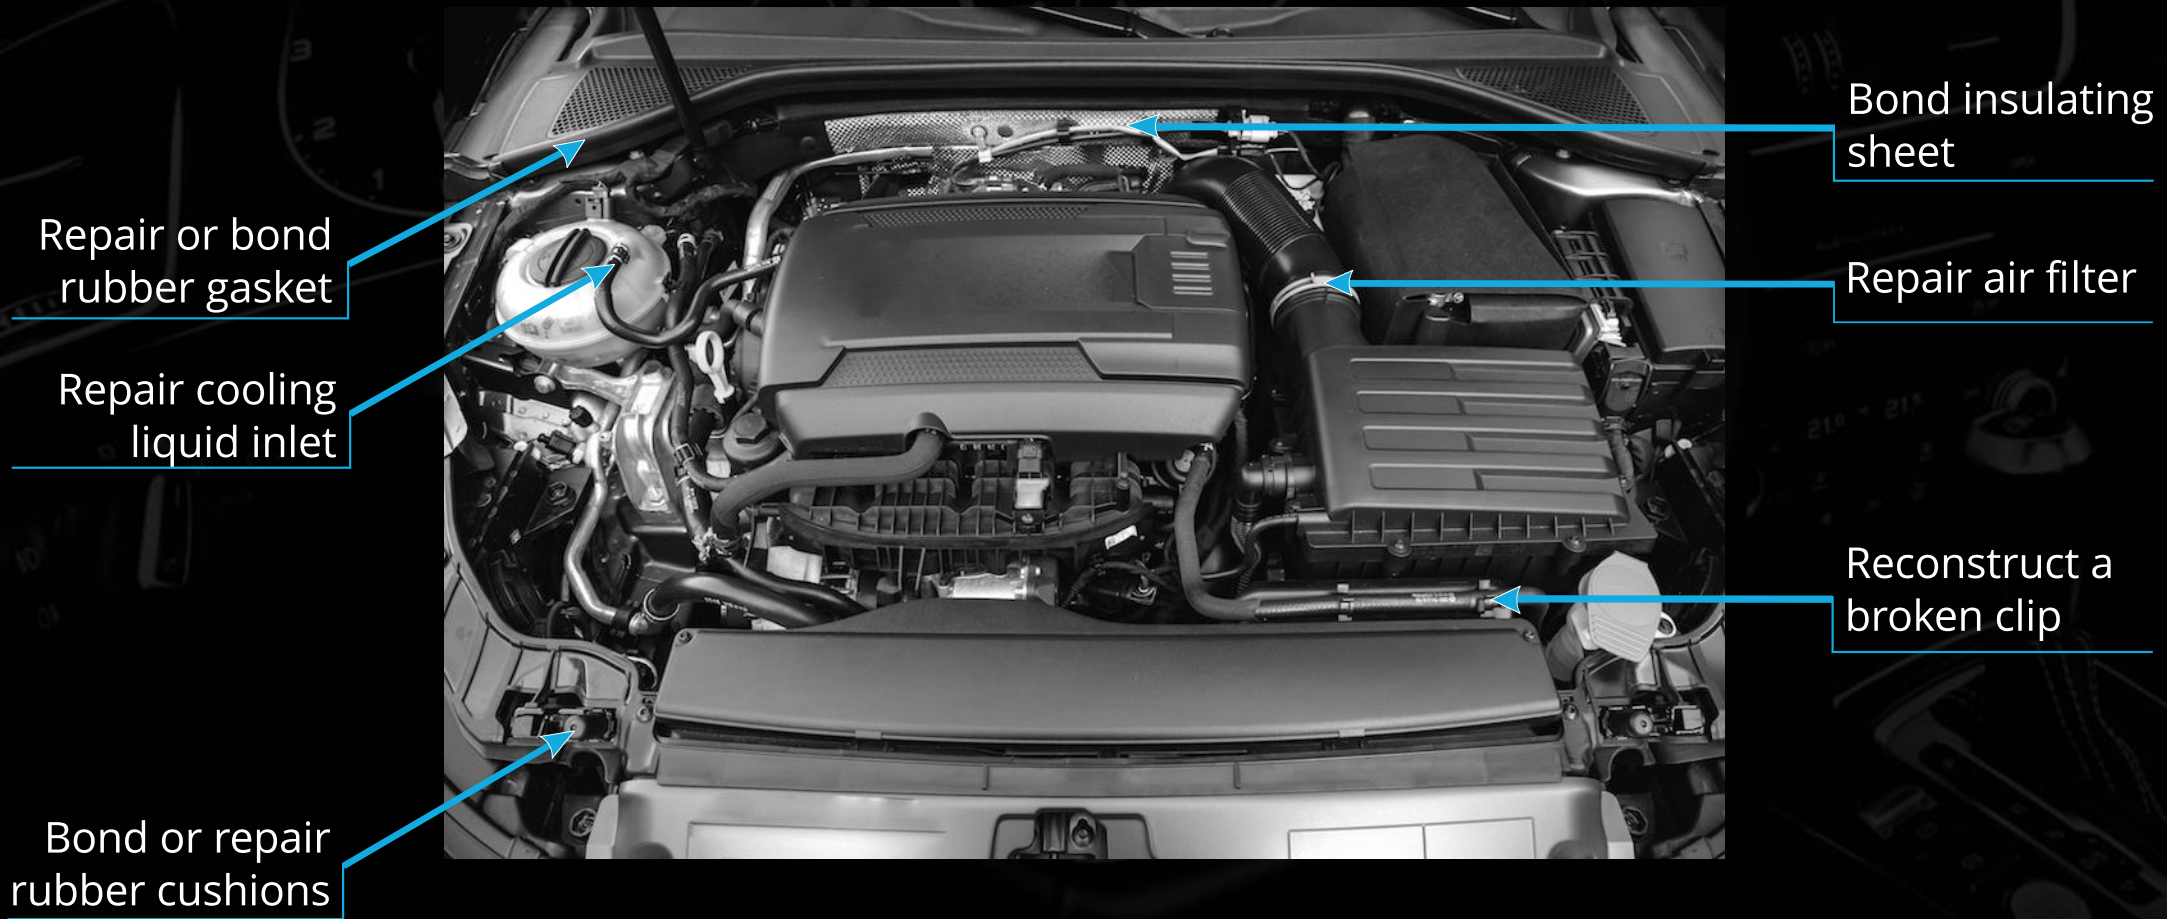

Thanks to its patented porous nanostructure, Super Repair is much tougher than any other 2-component cyanoacrylate.

AFINITI8CA®

Super Repair is frequently used for under-the-hood repairs, for any part that does not exceed 90°C at car operating conditions.

Super Repair is used for multiple applications in car interior repairs, where its bonding speed and filling properties make it an ideal products.

Car bumper repair represents a large portion of the car servicing market, for which Super Repair performs better than its competitors for being both tougher and more flexible.

Repair traditional bumper cracks

Repair of a large crack or hole

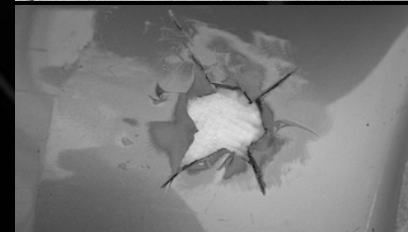

Super repair bonds in seconds which eliminates the need for clamping

Fiberglass can be used as support in combination with Super Repair

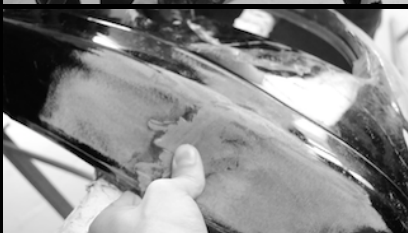

Super Repair hardens in 5 minutes into a tough and flexible plastic

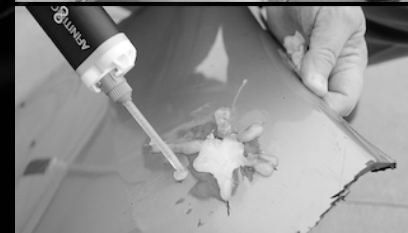

Once hard, it can be sanded and painted. Its harder consistency offers better aesthetic results than most PU or MC adhesives.

Once the support has hardened, Super Repair is used to fill the remaining cracks, and is subsequently sanded and painted.

Super Repair has been described by our users as both tougher and more flexible.

# Examples of frequent uses of Super Repair in car repair shops

Fix rear-view mirror

Fix side mirror

Fix parking sensors

Install parking sensors

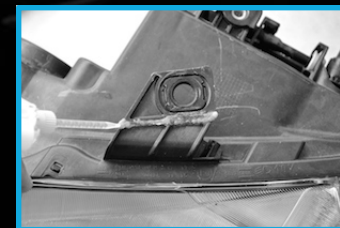

Bond or repair car fender

Repair/reconstruct radiator vent

Bond headlight clip

Reconstruct headlight clip

Repair wipers

All these repairs are applicable for motorbikes
